<u>Case No.</u>	<u>Customer Name</u>	<u>Description</u>	<u>Nonrecurring Charges</u>	<u>Monthly Rate</u>
95-IDL-- 50471E (1)(2)	AT&T Communications	Provides for 56 1.544 Mbps signal hand-offs at a Self-healing Transport Network (STN) customer premises Node located at 5000 South Bowen Rd. and 28 1.544 Mbps signal hand-offs at another customer premises node located at 1116 Houston. Signals are provided via Sonet equipment Nodes associated with the STN customer premises nodes.		\$4,760.00
		Case Preparation Charge	\$1,550.00	

(1) Service Expiration Date: January 9, 1999

(T)

(2) The billing period for this service is 36 months. In the event this service is terminated prior to the end of the billing period, AT&T Communications will pay the Telephone Company the net present value of all remaining payments, calculated with a discount rate equal to the Telephone Company's interstate special access rate of return authorized by the F.C.C. at the time of termination. The termination charge is calculated using the following value formula:

$$\text{Present Value} = \frac{\text{Rate} \times (1 - (1+i)^{-n})}{i}$$

Rate = monthly recurring rate

n = total number of months remaining for the service

i = monthly interest rate (discount rate) expressed as a decimal

Material on this page expires midnight, [March 1, 1997 - one year from the effective date of STN Sonet-based Interface Filing]. Subscriber shall at that time be required to either terminate the Service or convert the Service to the general tariff offering at the rates, terms and conditions provided thereunder. No termination charges shall apply in either instance.

#### ACCESS SERVICE TARIFF

Southwestern Bell Telephone Company (SWBT) provides telecommunications common carrier services in Texas as well as Arkansas, Kansas, Missouri, and Oklahoma. SWBT is a Missouri corporation with its corporate headquarters in St. Louis, Missouri. It is duly authorized to transact its business in Texas, with its principal Texas office located in Dallas at One Bell Plaza, P. O. Box 655521, Dallas, Texas 75265-5521.

Whenever reference is made in this tariff to other Intrastate Texas tariffs of SWBT, the reference is to the tariffs in force as of the effective date of this tariff, and to amendments thereto and successive issues thereof.

## SWITCHED ACCESS SERVICE

### 6.1 General Description

Switched Access Service provides a two-point communications path between a customer's premises and an end user's premises through the use of common terminating, switching, and trunking facilities and common subscriber plant of SWBT. Switched Access Service provides for the ability to originate calls from an end user's premises to a customer's premises, and to terminate calls from a customer's premises to an end user's premises in the LATA where service is provided.

Switched Access Service is provided in four service categories called feature groups. There are three rate categories which apply to Switched Access Service: Local Transport, Local Switching and Carrier Common Line. Local Transport and Local Switching are provided in this section of the tariff. Carrier Common Line is provided in Section 3 (Carrier Common Line Access Service). The provision of each feature group requires Local Transport facilities and the appropriate Local Switching functions. Local Transport provides for the transmission facilities between the customer's premises and the end office switch where the customer's traffic is switched to originate or terminate the customer's communications. Local Switching provides for the local end office switching and line termination necessary to complete the transmission of the customer's communications over Switched Access facilities to and from the end users served by the local end office. In addition, other service specific charges and nonrecurring charges may apply as specified in 6.6 (Rate Regulations).

The following diagram depicts a generic view of the components of Switched Access Service and the manner in which the components are combined to provide a complete Access Service.

#### SWITCHED ACCESS SERVICE

##### 6.2 Feature Group Descriptions

Switched Access Service is provided in four different feature group arrangements. These are generally differentiated by their technical characteristics, e.g., line side or trunk side connection at the SWBT entry switch, the manner in which an end user accesses the service (e.g., with or without an access code), and calling scopes.

Feature groups are arranged for either originating, terminating or two-way calling, based on the customer's order specifications. Originating calling permits the delivery of calls from Telephone Exchange Service locations to the customer's premises. Terminating calling permits the delivery of calls from the customer's premises to Telephone Exchange Service locations. Two-way calling permits the delivery of calls in both directions, but not simultaneously.

Following are detailed descriptions of each of the available feature groups.

#### SWITCHED ACCESS SERVICE

### 6.2 Feature Group Descriptions (Cont'd)

#### 6.2.1 Feature Group A (FGA)

##### (A) General

- (1) FGA is provided in connection with SWBT electronic and electromechanical end offices. At the option of the customer, FGA is provided on a single or multiple line group basis.
- (2) FGA provides a line side termination at the first point of switching. The line side termination will be provided with either ground start supervisory signaling or loop start supervisory signaling. The type of signaling is at the option of the customer.
- (3) The customer shall specify the first point of switching, within the selected LATA, at which the line side termination is to be provided.
- (4) When a FGA switching arrangement for an individual customer (a single line or entire hunt group) is discontinued at an end office, an intercept announcement is provided. This arrangement provides, for a maximum period of 90 days, an announcement that the service associated with the number dialed has been disconnected.

##### (B) Originating FGA

- (1) A seven digit local telephone number assigned by SWBT is provided for access to FGA switching and provides the calling area associated with the exchange in which the local telephone number is assigned. The seven digit local telephone number will be associated with the selected end office switch and is of the form NXX-XXXX. If the customer requests a specific seven digit telephone number that is available and the necessary facilities and equipment are available, the requested number will be assigned to the customer.
- (2) No address signaling is provided by SWBT. If address signaling is required by the customer, it must be provided by the customer's end user using inband tone signaling techniques. Such inband tone address signals will not be regenerated by SWBT and will be subject to the ordinary transmission capabilities of the Local Transport provided.

### SWITCHED ACCESS SERVICE

#### 6.2 Feature Group Descriptions (Cont'd)

##### 6.2.1 Feature Group A (FGA) (Cont'd)

###### (C) Terminating FGA

- (1) Terminating FGA may be utilized in conjunction with the following access services provided under this tariff:

- WATS Access Line Service
- 800 Number Portability Access Service
- 900 Access Service
- Directory Assistance
- Advanced Carrier Identification Service (ACIS)

(N)

- (2) FGA switching may be used to access valid NXXs in the LATA. Local operator service (0- and 0+), Directory Assistance (411 where available and 555-1212), emergency reporting service (911 where available), exchange telephone repair, time or weather announcement services of SWBT, community information services of an information service provider, and other customers' services (by dialing the appropriate digits) may also be accessed by FGA services. Charges for FGA terminating calls requiring operator assistance or calls to 911 will only apply where sufficient call details are available.

- (3) FGA switching is arranged with dial tone start-dial signaling. FGA switching may be arranged for dial pulse or dual tone multifrequency address signaling, subject to availability of equipment at the first point of switching. When FGA switching is provided in a hunt group or uniform call distribution arrangement, all FGA switching will be arranged for the same type of address signaling.

### SWITCHED ACCESS SERVICE

#### 6.2 Feature Group Descriptions (Cont'd)

##### 6.2.2 Feature Group B (FGB)

###### (A) General

- (1) FGB, when directly routed to an end office (i.e., provided without the use of an access tandem switch), is provided at appropriately equipped SWBT electronic end office switches. When provided via SWBT designated electronic access tandem switches, FGB switching is provided at SWBT electronic and electromechanical end office switches.
- (2) FGB is provided as trunk side switching. The switch trunk equipment is provided with wink start address signaling or immediate dial pulse address signaling and answer and disconnect supervisory signaling. FGB switching is provided with multifrequency address signaling in both the originating and terminating directions.
- (3) SWBT will establish a trunk group or groups for the customer at end office switches or access tandem switches where FGB switching is provided. When required by technical limitations, a separate trunk group will be established for each type of FGB switching arrangement provided, e.g., 900 Access Service. Different types of FGB switching may be combined in a single trunk group at the option of SWBT.
- (4) When all FGB switching arrangements are discontinued at an end office or in a LATA, an intercept announcement is provided. This arrangement provides, for a maximum period of 90 days, an announcement that the service associated with the number dialed has been disconnected.

###### (B) Originating FGB

- (1) Originating FGB may be utilized in conjunction with the following access services provided under this tariff, subject to the limitations in (2) following.

- 900 Access Service
- ACIS

(N)

FGB Switched Access may be used to originate ACIS and 900 Access Service until such time as FGD becomes available in the end office.

- (2) The uniform access code for FGB switching is either 950-XXXX or 950-1XXX. (The XXX represents a unique three digit number for each access customer.) These uniform codes will be the assigned access numbers for all FGB Switched Access Service provided to the customer by SWBT. The customer's end user is not required to dial an access code for originating ACIS and 900 Access Service provided with FGB Switched Access Service.

## SWITCHED ACCESS SERVICE

### 6.2 Feature Group Descriptions (Cont'd)

#### 6.2.2 Feature Group B (FGB) (Cont'd)

##### (B) Originating FGB

- (3) FGB is provided with multifrequency address signaling. Except for FGB switching provided with the automatic number identification (ANI) or rotary dial station signaling arrangements, any other address signaling in the originating direction, if required by the customer, must be provided by the customer's end user using inband tone signaling techniques. Such inband tone address signals will not be regenerated by SWBT and will be subject to the ordinary transmission capabilities of the Local Transport provided.

##### (C) Terminating FGB

- (1) Terminating FGB may be utilized in conjunction with the following access services provided under this tariff:

- WATS Access Line Service
- 800 Number Portability Access Service
- 900 Access Service
- Directory Assistance Service
- ACIS

- (2) FGB switching may be used to access NXXs in the LATA, time or weather announcement services of SWBT, community information services of an information service provider and other customers' services (by dialing the appropriate digits). When directly routed to an end office, only those NXX codes served by that end office may be accessed. When routed through an access tandem, only those NXX codes served by end offices subtending the access tandem may be accessed. Calls will be completed to Directory Assistance (NPA-555-1212 or 555-1212) when FGB switching is combined with Directory Assistance switching.

- (3) Calls in the terminating direction will not be completed to 950-XXXX access codes, local operator assistance (0- and 0+), Directory Assistance (411), exchange telephone repair service or service code 911 or 10XXX or 101XXXX access codes. FGB may not be switched to access another FGB, FGC or FGD in the same LATA (i.e., a call in the terminating direction cannot be processed via a 10XXX, 101XXXX or 950-XXXX to another carrier for termination within the same LATA).

### SWITCHED ACCESS SERVICE

#### 6.2 Feature Group Descriptions (Cont'd)

##### 6.2.3 Feature Group C (FGC)

###### (A) General

- (1) FGC is provided at all SWBT end office switches on a direct trunk basis or via SWBT designated access tandem switches. FGC switching is provided to the customer (i.e., providers of MTS and WATS) at an end office switch unless FGD end office switching is provided in the same office. When FGD switching is available, FGC switching will not be provided.
- (2) FGC is provided as trunk side switching through the use of end office or access tandem switch trunk equipment. The switch trunk equipment is provided with answer/disconnect supervision. Wink start start-pulsing signals are provided in all offices where available. In those offices where wink start start-pulsing signals are not available, delay dial start-pulsing signals will be provided; however, where immediate dial pulse signaling is provided, no start-pulsing signals are provided.
- (3) SWBT will establish a trunk group or groups for the customer at end office switches or access tandem switches where FGC switching is provided. When required by technical limitations, a separate trunk group will be established for each type of FGC switching arrangement provided. Different types of FGC or other switching arrangements may be combined in a single trunk group at the option of SWBT.
- (4) FGC is provided with multifrequency address signaling except in certain electromechanical end office switches where multifrequency signaling is not available. In such switches, the address signaling will be dial pulse or immediate dial pulse, whichever is available. Up to 12 digits of the called party number dialed by the customer's end user using dual tone multifrequency or dial pulse address signals will be provided by SWBT equipment to the customer's premises where the Switched Access Service terminates. Such called party number signals will be subject to the ordinary transmission capabilities of the Local Transport provided.

###### (B) Originating FGC

- (1) Originating FGC may be utilized in conjunction with the following access services provided under this tariff:
  - WATS Access Line Service
  - 900 Access Service
  - Operator Call Processing Service
  - ACIS

**(B) Originating FGC (Cont'd)**

- (2) No access code is required for FGC switching. The telephone number dialed by the customer's end user shall be a seven or ten digit number for calls in the North American Numbering Plan (NANP). For international calls outside the NANP, a seven to twelve digit number may be dialed. The form of the numbers dialed by the customer's end user is NXX-XXXX, 0 or 1 + NXX-XXXX, NPA + NXX-XXXX, 0 or 1 + NPA + NXX-XXXX, and, when the end office is equipped for International Direct Distance Dialing (IDDD), 01 + CC + NN or 011 + CC + NN. (IDDD provides the capability of switching international calls with service prefix and address codes having more digits than are capable of being switched through a standard FGC equipped end office.)

**(C) Terminating FGC**

- (1) Terminating FGC may be utilized in conjunction with the following access services provided under this tariff:
- WATS Access Line Service
  - 800 Number Portability Access Service
  - 900 Access Service
  - Directory Assistance Service
  - Operator Call Processing Service
  - ACIS
- (2) FGC switching may be used to access NXXs in the LATA, time or weather announcement services of SWBT, community information services of an information provider, and other customers' services (by dialing the appropriate codes) when the services can be reached using NXX codes. When directly routed to an end office, only those NXX codes served by that office may be accessed. When routed through an access tandem, only those NXX codes served by offices subtending the access tandem may be accessed. Calls will be completed to Directory Assistance (NPA-555-1212 or 555-1212) when FGC switching is combined with Directory Assistance switching.
- (3) Calls in the terminating direction will not be completed to 950-XXXX access codes, local operator assistance (0- and 0+), Directory Assistance (411), exchange telephone repair service or service code 911 or 10XXX or 101XXXX access codes. FGC may not be switched to access another FGB, FGC or FGD in the same LATA. (C)

### SWITCHED ACCESS SERVICE

#### 6.2 Feature Group Descriptions (Cont'd)

##### 6.2.4 Feature Group D (FGD)

###### (A) General

- (1) FGD is provided at SWBT designated end office switches whether routed directly or via SWBT designated electronic access tandem switches.
- (2) FGD is provided as trunk side switching through the use of end office or access tandem switch trunk equipment. The switch trunk equipment is provided with wink start start-pulsing signals and answer and disconnect supervisory signaling.
- (3) SWBT will establish a trunk group or groups for the customer at end office switches or access tandem switches where FGD switching is provided. When required by technical limitations, a separate trunk group will be established for each type of FGD switching arrangement provided. Different types of FGD or other switching arrangements may be combined in a single trunk group at the option of SWBT.
- (4) FGD Switching is provided with inband multifrequency address signaling or out of band SS7 signaling. With multifrequency address signaling and SS7 signaling up to 12 digits of the called party number dialed by the customer's end user using dual tone multifrequency or dial pulse address signals will be provided by SWBT equipment to the customer's premises where the Switched Access Service terminates. Such address signals will be subject to the ordinary transmission capabilities of the Local Transport provided.

###### (B) Originating FGD

- (1) Originating FGD may be utilized in conjunction with the following access services provided under this tariff:
  - WATS Access Line Service
  - 800 Number Portability Access Service
  - 900 Access Services
  - MicroLink I Access Capability
  - Operator Call Processing Service
  - ACIS
- (2) The uniform access code for FGD switching is 10XXX or 101XXXX. (The XXX or XXXX represents a unique three or four digit number for each access customer.) This uniform code will be the assigned access number for all FGD Access Service provided to the customer by SWBT. When the 10XXX or 101XXXX access codes are used, FGD switching also provides for dialing the digit 0 for access to the customer's operator, 911 for access to SWBT's emergency reporting service, or the end-of-dialing digit (#) for cut-through access to the customer's premises. FGD Switched Access Service may be originated by using the 950-XXXX or 950-1XXX access code if the customer requests the FGD with 950 access feature.

##### 6.2 Feature Group Descriptions (Cont'd)

##### 6.2.4 Feature Group D (FGD) (Cont'd)

###### (B) Originating FGD (Cont'd)

- (3) When a customer changes an existing FGB to FGD in the same end office, end users may (if facilities are available) dial either the previous FGB access code or the new FGD access code for a maximum of 90 days. This arrangement will be provided at the customer's request, where facilities are available. In addition, use of the FGB access code may continue from public coin, coinless and hotel classes of service, until the customer requests otherwise. The customer must be prepared to differentiate between 950-XXXX and 950-1XXX calls and the other FGD calls on the same trunks by using the signaling described in Technical Reference TR-TSY-000064 LATA Switching System General Requirements. All access minutes will be rated as FGD.
- (4) No access code is required for calls to a customer over FGD Switched Access Service (this includes MicroLink I Access Capability provided in conjunction with FGD) if the end user's telephone exchange service is arranged for presubscription to that customer, as specified in 13.3.1 (Easy Access Dialing). The customer's end user is not required to dial an access code for originating 800 NPAS and 900 Access Service provided with FGD Switched Access Service. 800 NPAS, ACIS and 900 Access Service and ACIS calls dialed with an access code will be blocked by SWBT. (N)
- (5) Where no access code is required, the telephone number dialed by the customer's end user shall be a seven or ten digit number for calls in the North American Numbering Plan (NANP). For international calls outside the NANP, a seven to twelve digit number may be dialed. The form of the numbers dialed by the customer's end user is NXX-XXXX, 0 or 1 + NXX-XXXX, NPA + NXX-XXXX, 0 or 1 + NPA + NXX-XXXX, and, when the end office is equipped for International Direct Distance Dialing (IDDD), 01 + CC + NN or 011 + CC + NN. (IDDD provides the capability of switching international calls with service prefix and address codes having more digits than are capable of being switched through a standard FGD equipped end office.)

###### (C) Terminating FGD

- (1) Terminating FGD may be utilized in conjunction with the following access services provided under this tariff:
- WATS Access Line Service
  - 800 Number Portability Access Service
  - 900 Access Service
  - Directory Assistance Service
  - Operator Call Processing Service
  - ACIS

#### SWITCHED ACCESS SERVICE

#### 6.3 Miscellaneous Services Description

##### 6.3.1 WATS Access Line Service

WATS Access Line Service is a service which combines switched access service with Voice Grade Special Access Service to connect an end user premises with a WATS Access Line Service serving office.

WATS Access Line Service is provided with either dial pulse or dial tone multifrequency address signaling and either loop start or ground start supervisory signaling. The choice of the type of signaling is at the option of the customer. A diagram and further description of WATS Access Line Service and applicable charges is provided in 7.1.1(D) (WATS Access Line Service).

##### (A) Originating WATS Access Line Service (Continued)

- (1) WATS Access Line Service used for originating calling purposes is available only in conjunction with PG2 and PGD Switched Access Service.
- (2) When WATS Access Line Service is provided from a WATS serving office converted to equal access, the customer will be subject to the rules governing the selection of a primary IC for Easy Access Dialing purposes as well as the charges applicable to new customers for subsequent changes to the customer's primary IC selection as specified in 13.4.3(1) (Easy Access Dialing).
- (3) WATS Access Line Service may not be used for the completion of Local Exchange Service calls.
- (4) When an end-user is located in an exchange other than the exchange where the end-user's WATS serving office is located, and the end-user's exchange and the exchange of the WATS serving office have different calling scopes, the blocking of local calls on foreign exchange served WATS access lines will be based on the calling scope of the end-user's exchange rather than the exchange of the WATS serving office. Because of technical problems in certain foreign exchange WATS serving offices, SWBT may not be able to block local calls within the end-user's exchange; therefore, no blocking of local calls in the end-user's exchange will occur.
- (5) WATS Access Line Service may not be used to access 911, 0+ or 01.
- (6) Originating WATS Access Line service is provided and billed as follows.

When utilized for originating InterLATA only:

- InterLATA calling is provided by the customer and switched access charges as specified in 6.7 (Rates and Charges) apply to such usage.

**(A) Originating WATS Access Line Service (Outward) (Cont'd)**

(6) (Cont'd)

- Any intraLATA traffic originated by the customer's end-user will be carried by SWBT and will be billed as described in the WATS Tariff.
- The WATS Access Line Channel Termination charge will be billed to the customer as described in Section 7 for originating intrastate interLATA only WATS Access Line Service.

When utilized for originating interLATA and intraLATA (jointly provided):

- InterLATA calling is provided by the customer and switched access charges as specified in 6.7 (Rates and Charges) apply to such usage.
- IntraLATA calling is provided by SWBT and will be billed as described in the WATS Tariff.
- A WATS Access Line charge will be billed to the end user as specified in the WATS Tariff.

**(B) Terminating WATS Access Line Service (Inward)**

- (1) WATS Access Line Service used for terminating calling purposes is available in conjunction with FGA, FGB, FGC, and FGD Switched Access Service.
- (2) WATS Access Line Service may not be used for the completion of local calls that are not dialed in the 800 format.
- (3) Terminating WATS Access Line Service is provided and billed as follows.

When utilized for the completion of non-joint provided 800 Access Service calling:

- a non-joint provided WATS Access Line Channel Termination charge will apply as described in Section 7.

When utilized for the completion of joint provided 800 Access Service as described in 6.3.2 (800 Access Service):

- a WATS Access Line charge as specified in the WATS Tariff will apply.

#### SWITCHED ACCESS SERVICE

### 6.3 Miscellaneous Services Descriptions (Cont'd)

#### 6.3.2 800 Number Portability Access Service (800 NPAS)

(T)

##### (A) General

800 NPAS is an originating offering utilizing FGD trunk side Switched Access Service for the delivery of 800 calls. 800 NPAS is intended to allow SWBT to route 800 calls to the appropriate 800 Service Provider. 800 NPAS allows end users to originate 800 calls on a 1+ basis without the use of an access code. The 800 NPAS Provider will be identified from the dialed 800 number (i.e., 1+800+XXX+XXXX). The 800 Service Provider has the option of receiving the dialed 800 number (i.e., 1+800+XXX+XXXX) or a translated ten-digit POTS number (i.e., 1+NPA+XXX+XXXX). For 800 NPAS calls outside of the North American Numbering Plan (NANP), the 800 Service Provider will receive a six digit data base translation.

(C)

When an end user originates a 1+800+XXX+XXXX call, SWBT will determine how the call is to be routed, based on the 800 number dialed. If an 800 NPAS call originates in an end office not SSP equipped to provide the customer identification function, the call will be routed to an SSP equipped Telephone Company access tandem. Once the 800 NPAS Provider has been identified, the 800 call, served by SWBT's SSP, will be routed to the 800 Service Provider's defined FGD trunk group.

##### (B) Provisioning

Originating 800 NPAS traffic must be provided over FGD or BSA-D trunk groups. The 800 Service Provider may use FGA, FGB, FGC, or FGD to terminate an 800 call. When FGA, FGB, FGC, or FGD is used to terminate an 800 call, the customer is required to deliver 800 calls to SWBT in the standard POTS number North American Numbering Plan format.

Replacing:

#### **SWITCHED ACCESS SERVICE**

### **6.3 Miscellaneous Services Descriptions (Cont'd)**

#### **6.3.2 800 Access Service (Cont'd)**

##### **(C) Joint Provided and Non-Joint Provided**

800 Access Service may be provided as either a joint provided or a non-joint provided service, as described herein.

When intrastate WATS Access Line Service is utilized for the completion of terminating 800 Access Service traffic, the customer's 800 Access Services within the state of Texas that terminate on these intrastate WATS Access Line Services must all be joint provided, or they must all be non-joint provided. When interstate WATS Access Line Service is utilized for the completion of terminating intrastate 800 Access Service traffic, the customer's 800 Access Services within the state of Texas that terminate on these interstate WATS Access Line Services must all be joint provided, or they must all be non-joint provided. The customer must provide written notification to SWBT specifying that the customer's intrastate WATS Access Line Services within the State of Texas are to be utilized for the completion of joint provided or non-joint provided 800 Access Service calling, and/or that the customer's interstate WATS Access Line Services within the state of Texas are to be utilized for the completion of joint provided or non-joint provided intrastate 800 Access Service calling.

##### **(1) Joint Provided**

###### **(a) Provisioning**

The 800 traffic must complete on one of the following:

- intrastate WATS Access Line Service, as described in 6.3.1 (WATS Access Line Service);
- interstate WATS Access Line Service which carries both interstate and intrastate 800 traffic as described in SWBT's Interstate Access Tariff F.C.C. No. 68.

###### **(b) Billing**

SWBT will bill:

- originating and terminating switched access charges, set forth in 6.7 (Rates and Charges), to the 800 Access Service customer for intrastate interLATA 800 usage;
- terminating intrastate intraLATA 800 usage as specified in the Wide Area Telecommunications Service Tariff.
